Tree Distribution

Search by tree type

Tree Type	No. of Trees	Area (dunums)	Percentage of Area (%)
Date Palm	137,812	2,822.1	16.1%
Fruit Trees	462	23.9	0.1%
Forest Trees	9,905	372.2	2.1%
Olive	941	26.8	0.1%

Rows per page: 10 1-4 of 4

Farms, Farm Monitoring, Enterprise Information. The navigation and categories are not clear yet. They could also do more to follow a natural user behaviour.

Seven of the ten entries are support and settings. Half the menu is about the tool, not the farms. This needs to be reduced.

The six analyses the client is buying appear nowhere here. This will need to be integrated in a mindful way.

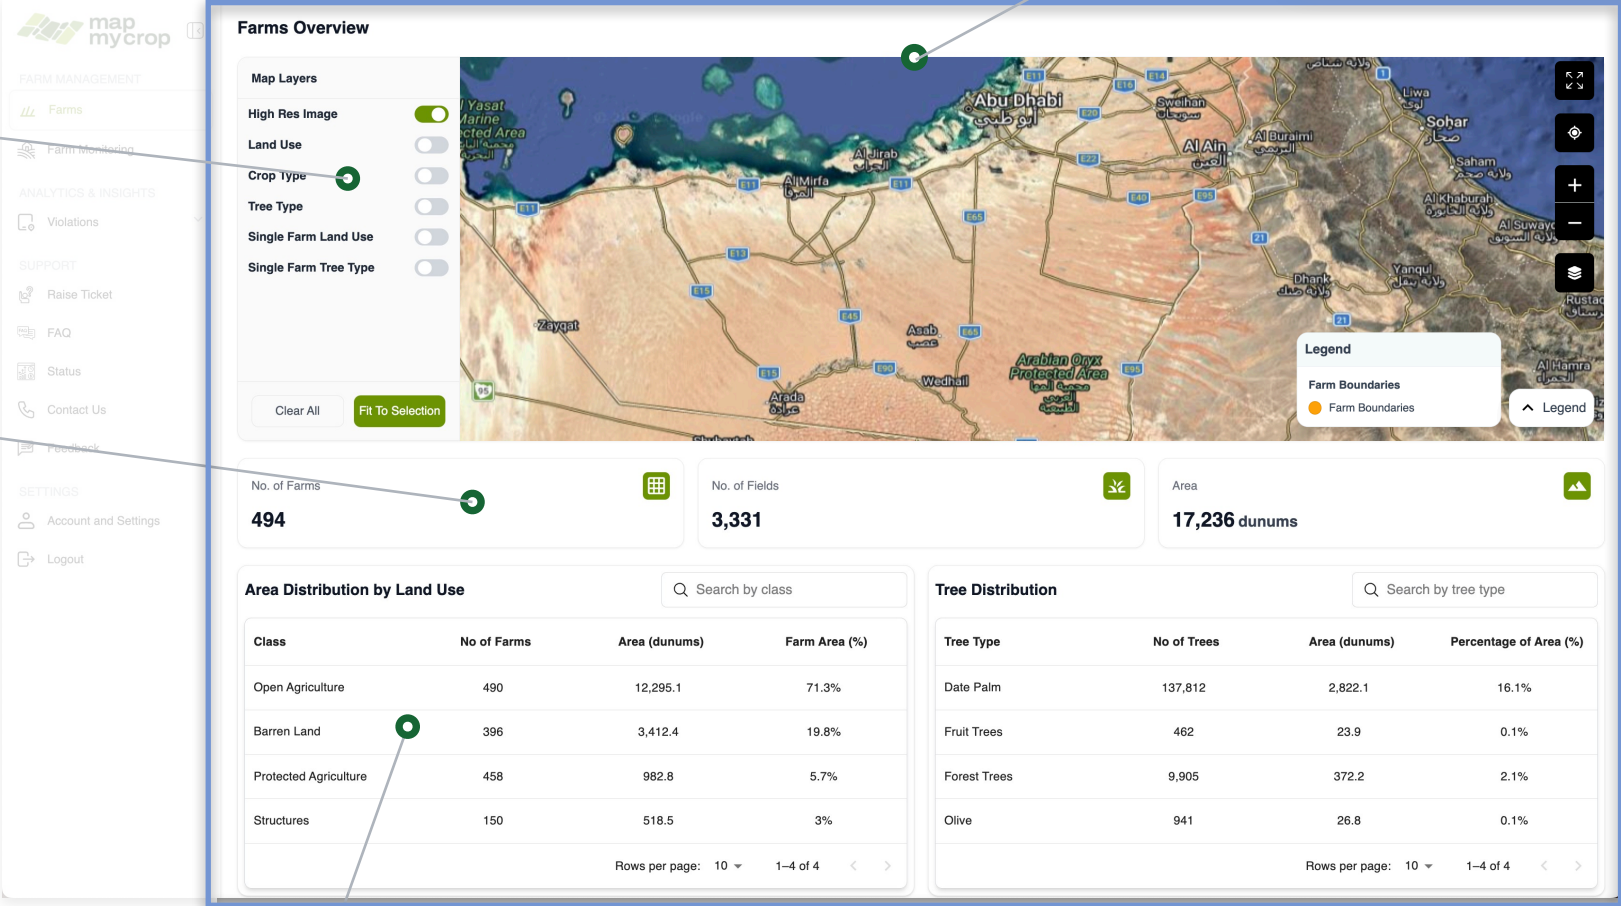

Analysis of Current Solution

Page morphology - very low density of information

The map only shows farm boundaries, which requires a high level of zoom, appearing empty at landing. We can encode more interesting information on a map.

Six switches. No information is shown on the map by default. Why High Res Image is in that list ? What's the difference between Tree Type and Single Farm Tree Type ?

Three counters count the inventory. They never say whether things are fine. Little information is shown for a large area taken.

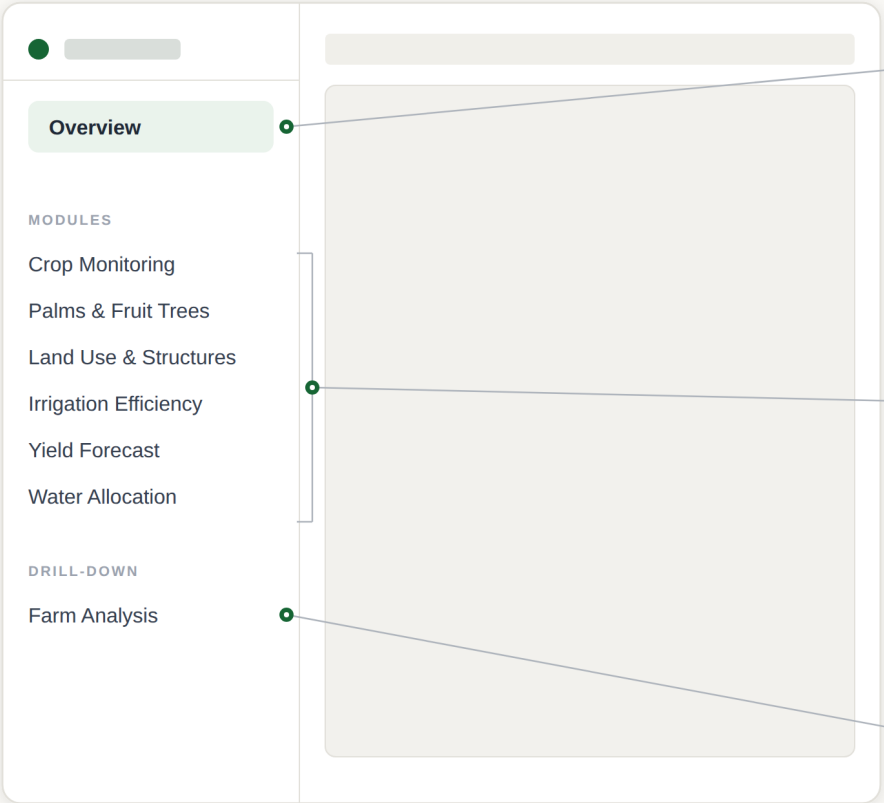

Totals by category. No ranking, no sense of what is being monitored or how well we are doing.

Step 1 : A better use of the navigation pane

Split the navigation pane into 3 technical levels

💡 What it could look like

Level 1 : The general situation
Outlining the current situation in the region

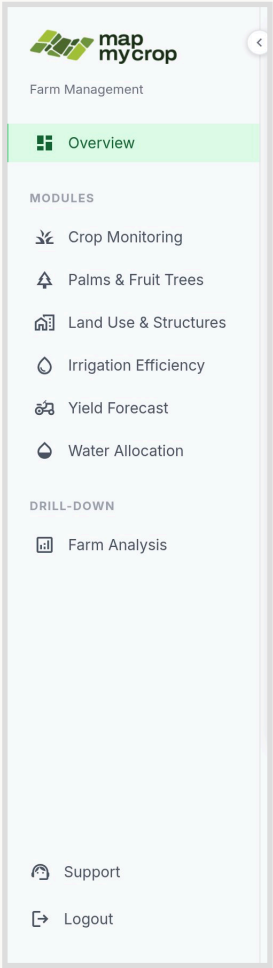

Level 2 : The modules
Responding to specific questions

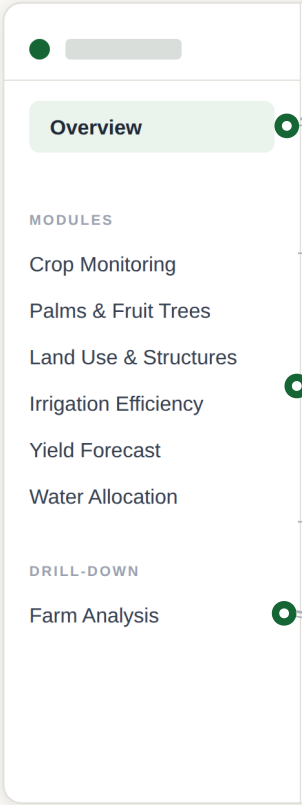

Level 3 : The farm
Showing what happens on each farm

Each entry in the menu answers at one depth.

Step 2 : A thoughtful layout for each level

Maximising information per pixel and attention span

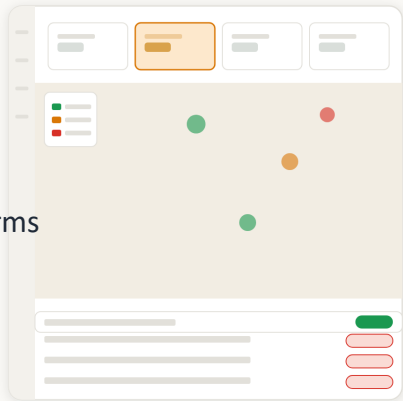

Overview

- Composite health metric
- Composite health heat map
- Summary card for all 6 modules

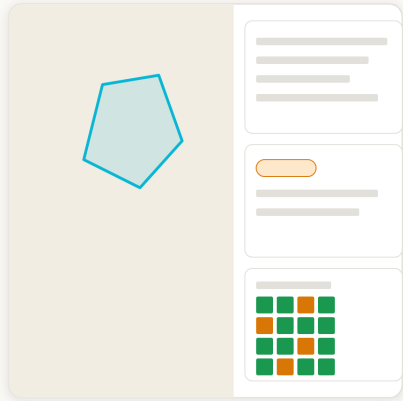

A module

- Per module summary scores
- Per module health map
- Per module ranked table of farms

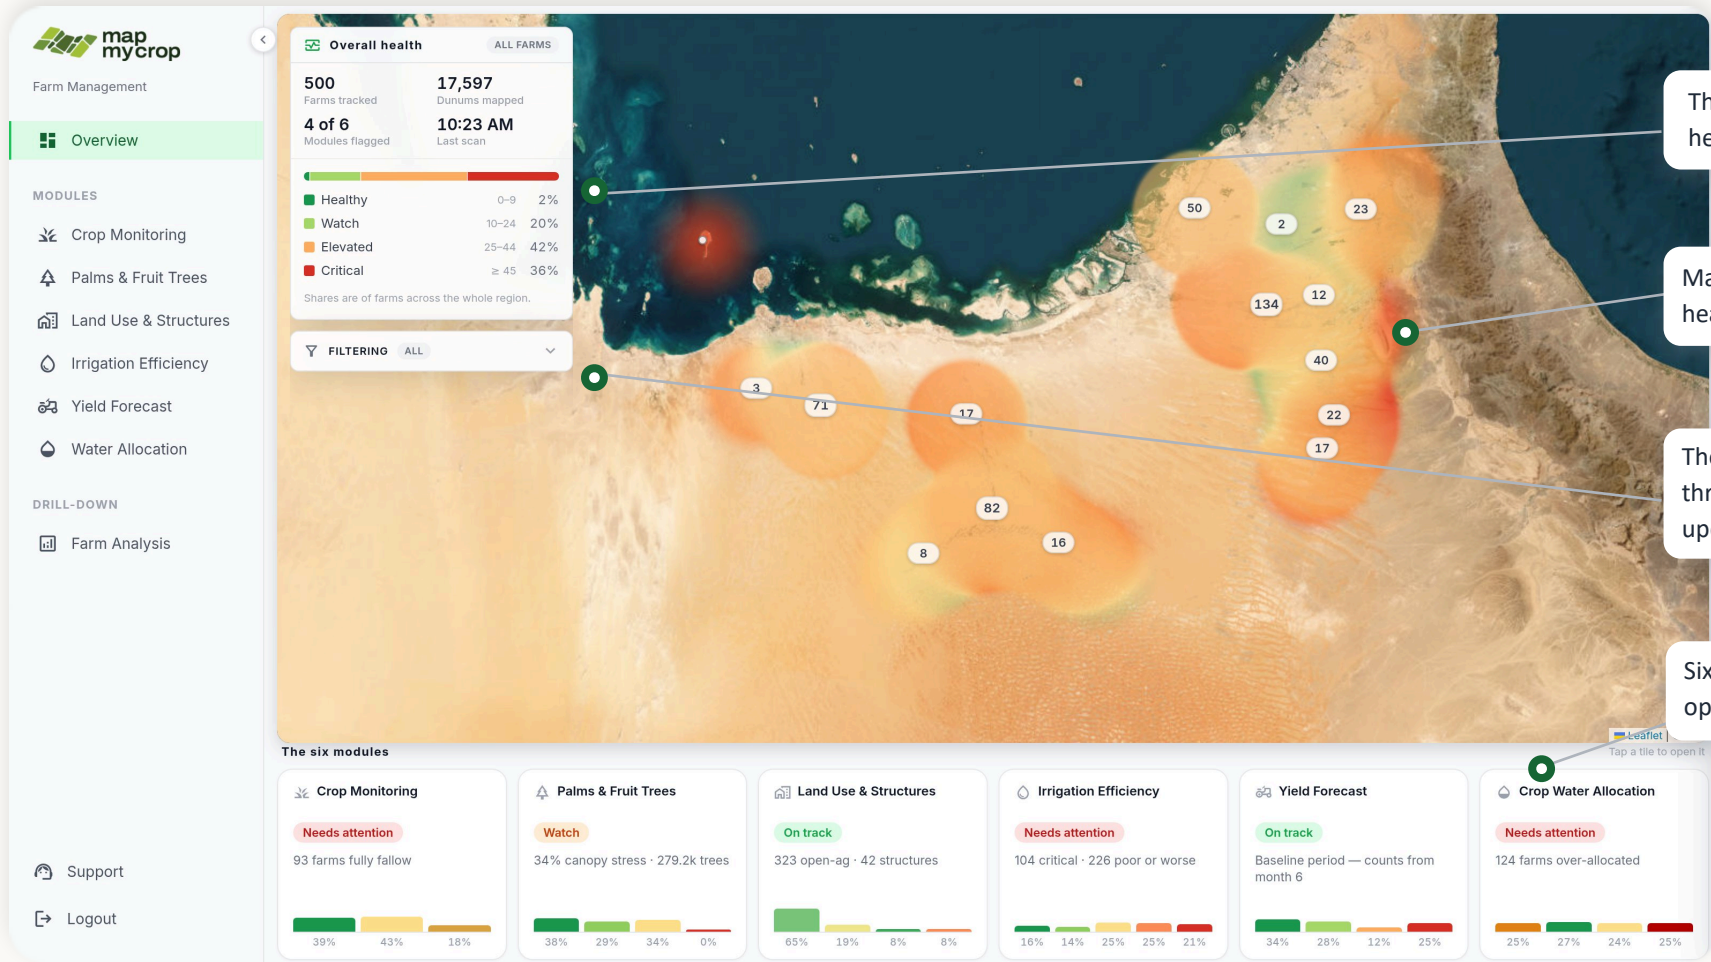

Farm Analysis

- Per farm scores
- Per farm analytics
- Per farm suggestions

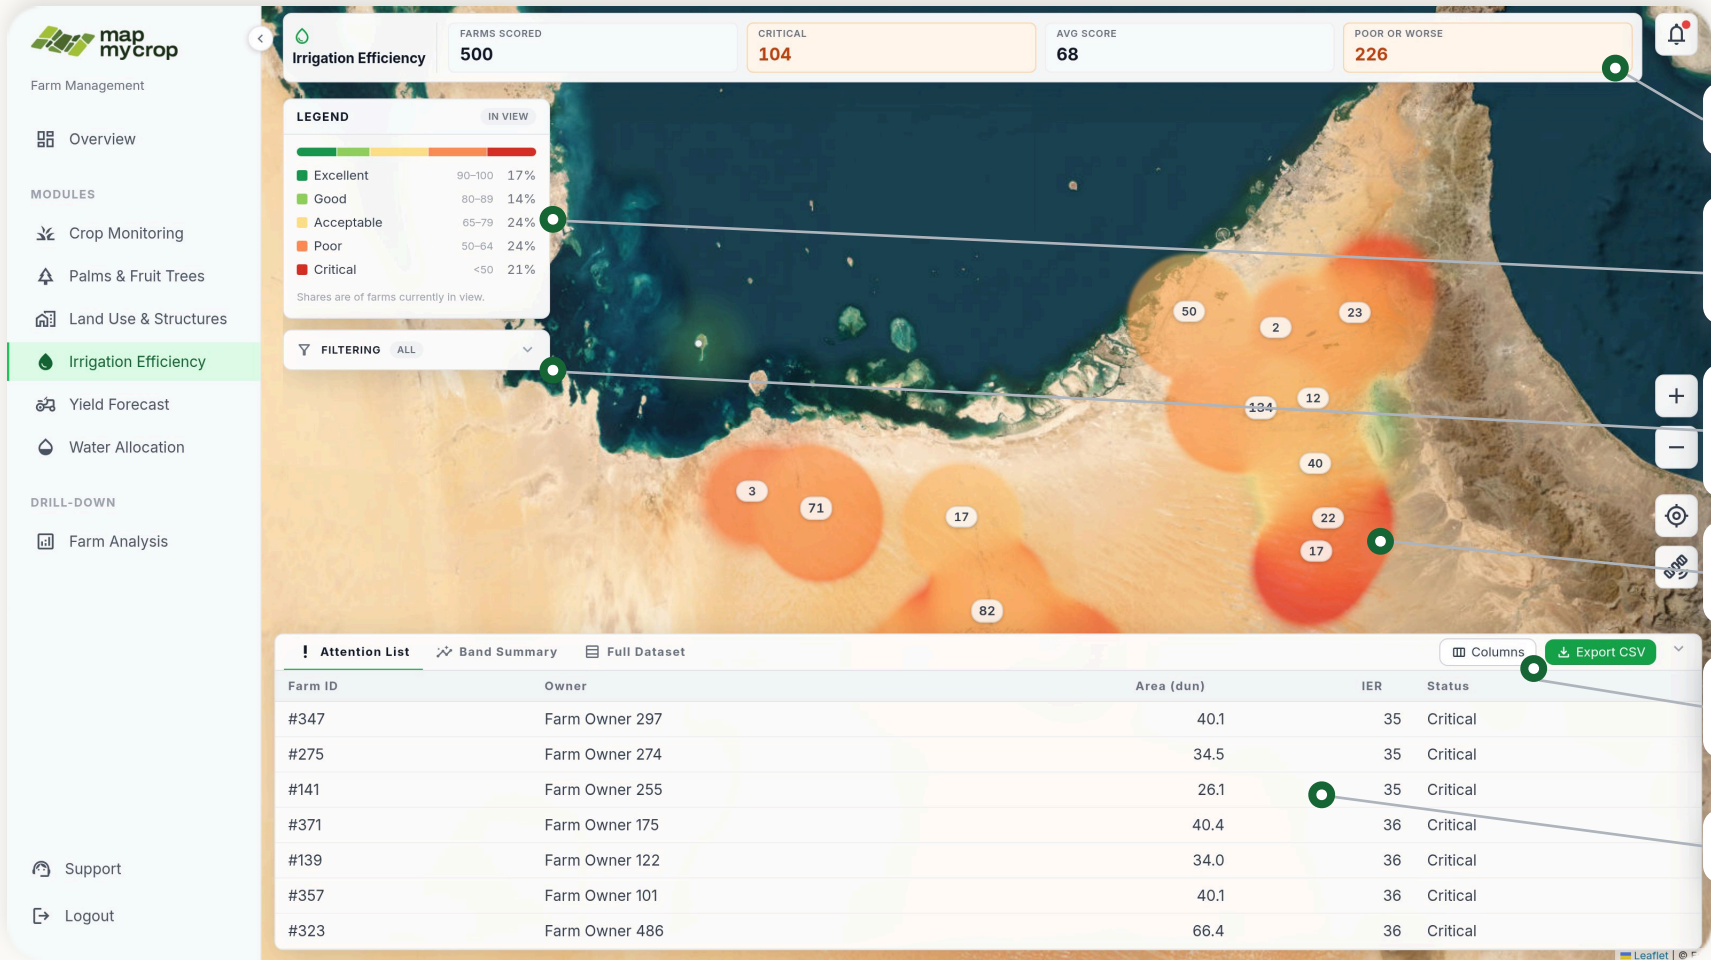

Level 1 layout : Overview page

A composite health metric on the map, 6 verdict cards for the 6 modules

Level 2 layout : The module view

Full sorted data table, high-level metrics and taxonomy as filter

The numbers for this module.

One legend and one chart at a glance, to quickly understand numbers

Tick a crop or a tree type. The map and every number update together.

Map of farm boundaries + heatmap

Export, customise columns, sort, reorder, etc

Table with farms ranked worst first.

Level 2 layout : Zooming in

Single farm metrics included
